

GAGAN SHARMA

Bengaluru, Karnataka

+91 7006387398 gagansharma11564@gmail.com GitHub LinkedIn Portfolio

Data Scientist with hands-on experience in Machine Learning, Deep Learning, Data Analytics, and production-oriented ML systems. Skilled in Python, SQL, Scikit-learn, XGBoost, TensorFlow, Pandas, and NumPy, with experience in exploratory data analysis, feature engineering, predictive modeling, and model evaluation. Built end-to-end ML solutions with FastAPI, Docker, MLflow, CI/CD, model monitoring, and deployment workflows.

TECHNICAL SKILLS

Programming: Python, SQL, C++

Git, GitHub Actions, CI/CD, Model Monitoring, Drift Detection, Canary Deployment, Model Rollback

Machine Learning: Scikit-learn, XGBoost, Classification, Regression, Clustering, Feature Engineering, Hyperparameter Tuning, Model Evaluation

Data Science & Analytics: Pandas, NumPy, EDA, Statistical Analysis, Data Preprocessing, Data Cleaning, Data Wrangling

Deep Learning & AI: TensorFlow, Keras, CNNs, Deep Neural Networks, Computer Vision

Data Visualization & Databases: Matplotlib, Seaborn, MySQL, PostgreSQL, MongoDB, Power BI, Tableau, Excel

MLOps & Engineering: MLflow, FastAPI, Docker,

PROFESSIONAL EXPERIENCE

Savantis Solutions India Pvt. Ltd.—Deployed at HCL Tech (Pfizer) Dec 2025 – Jul 2026, Hyderabad

Analyst Trainee

- Analyzed operational datasets and maintained structured Excel reports to support data-driven workflow and operational reporting.
- Performed data validation and quality checks across study access records, identifying inconsistencies and improving reporting accuracy.
- Prepared recurring reports and maintained standardized datasets for operational tracking and stakeholder reporting.
- Analyzed workflow metrics and operational records to identify data inconsistencies, trends, and process-level issues.
- Supported day-to-day data and reporting activities while maintaining accuracy, consistency, and adherence to defined processes.

Wyreflow Technologies

Oct 2024 – Nov 2024, Bangalore

Tester Intern

- Executed functional and regression testing across web applications, validating features against defined requirements.
- Designed and executed 50+ test cases, documenting defects and collaborating with the team for resolution.
- Performed API and application-level validation to identify functional issues and improve release quality.

Learnbay

Jan 2024 – Sept 2024, Bangalore

Data Scientist Intern

- Performed exploratory data analysis and data preprocessing using Python, Pandas, and NumPy to identify patterns, inconsistencies, and useful features.
- Built analytical dashboards and visualizations to communicate data-driven insights and support business understanding.
- Applied feature engineering and machine learning techniques to prepare datasets for predictive modeling.
- Developed and evaluated a CNN-based image classification model using TensorFlow, achieving approximately 92% accuracy.
- Optimized data pipelines to reduce data processing time and improve overall workflow efficiency.

Cisco

Sept 2023 – Oct 2023, Bangalore

Networking Intern

- Gained practical exposure to computer networking concepts, network configuration, and troubleshooting.
- Worked with networking fundamentals including IP addressing, routing, switching, and network protocols.
- Applied networking concepts through practical exercises and troubleshooting activities.

PROJECTS

Customer Churn MLOps System | GitHub | Live API

- Built an end-to-end customer churn prediction system using XGBoost, covering model training, evaluation, versioning, and production serving.
- Implemented MLflow experiment tracking, model registry, version management, and production model promotion with quality gates.
- Deployed a FastAPI prediction service using Docker, with authentication, health checks, request tracing, structured logging, and model reload capabilities.
- Built GitHub Actions CI/CD workflows for automated testing, Docker validation, monitoring, retraining, and deployment workflows.
- Implemented 90/10 application-level canary deployment, candidate-vs-production evaluation, drift monitoring, and automated model rollback.

Financial Risk and Fraud Analysis | GitHub

- Analyzed 284K+ financial transactions to identify patterns associated with fraudulent activity and financial risk.
- Developed a Deep Neural Network using TensorFlow for fraud classification on highly imbalanced transaction data.
- Applied class-balancing techniques and evaluated model performance using precision, recall, F1-score, and other classification metrics.

Supply Chain Inventory Optimization | GitHub

- Analyzed supply chain and inventory data using Python and SQL to identify demand, inventory, and operational patterns.
- Built 3 interactive Power BI dashboards to visualize inventory levels, demand trends, and key operational metrics.
- Performed data preprocessing and exploratory analysis to generate actionable insights for inventory planning.

Bank Loan Granting — EDA and Classification | GitHub

- Performed in-depth EDA on 5,000+ loan application records with 14 features, including 3D plots and map visualizations.
- Developed classification models to predict loan approval outcomes and compared model performance using appropriate evaluation metrics.
- Performed data cleaning, preprocessing, anomaly correction, feature analysis, and model evaluation.
- Applied hyperparameter tuning and compared classification models using appropriate evaluation metrics.

CERTIFICATIONS

AI Force for Software Development – Gen AI (2026)

100 Days of Code: The Complete Python Pro Bootcamp – Udemy (2024) | Verify

Data Analysis Batch – Cisco (2023) | Verify

EDUCATION

SDM College of Engineering And Technology

Dharwad, Karnataka

Bachelor of Engineering - Civil Engineering — CGPA: 8.05/10

2023

ACTIVITIES & INTERESTS

- Maintains **10+ GitHub repositories** featuring Machine Learning, Deep Learning, and Computer Vision projects.
- Continuously develops technical skills through **self-learning, online courses, and hands-on projects** in AI and MLOps.
- Participated in **team-based hackathons and collaborative coding events** during engineering.

Interests: Machine Learning, Artificial Intelligence, MLOps, Data Visualization, Open Source, Chess & Problem Solving
